

Ideation Phase

Define the Problem Statements

Date	22 June 2026
Team ID	
Project Name	Automated Network Request Management System
Maximum Marks	2 Marks

2.1 PROBLEM STATEMENT

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1  Employee (Requester)	Request network services such as VPN access, firewall changes, VLAN creation, or IP allocation quickly and efficiently.	The request process is manual and requires multiple emails or phone calls before reaching the appropriate team.	There is no centralized system to submit, track, or monitor network requests.		 Frustrated, uncertain, and delayed in completing my work.
PS-2  Manager (Approver)	Review and approve network service requests efficiently.	Requests arrive from multiple communication channels without proper tracking or prioritization.	Manual processing makes it difficult to manage approvals consistently and on time.		 Overloaded, inefficient, and concerned about delayed service delivery.
PS-3  Network Engineer	Receive implementation tasks with complete and accurate request information.	Task assignments are performed manually and may contain incomplete or inconsistent details.	There is no automated workflow to generate and assign implementation tasks.		 Confused, delayed, and less productive while fulfilling requests.
PS-4  IT Administrator	Monitor the overall network request process and maintain audit records.	Request information is scattered across emails and spreadsheets, making reporting and auditing difficult.	Manual tracking does not provide centralized visibility or historical records.		 Concerned about operational efficiency, compliance, and service quality.
